Special Assignments

2017-present	Director, Virtual Institute for Smart Energy, State of North Rhine-Westphalia
2011-present	Chair of Energy Expert Commission of the German Government for monitoring the energy transformation

About the Chair for Energy & Resource Economics (CERES)

The energy transition is going to change the framework of the German energy system fundamentally. The primary goal thereby is to mitigate climate change, which demands a reduction in the usage of fossil fuels. The Chair for Energy & Resource Economics (CERES) deals with the economic analysis of regulation in energy, climate and resource politics. Main analytic instruments are the use of numerical simulation models (esp. CGE models), as well as experimental and econometric methods, to quantitatively estimate and evaluate the welfare effects of political interventions. Next to research and teaching, the chair is engaged in science-based policy-consultancy.

About the Center of Applied Economic Research Münster (CAWM)

The Center of Applied Economic Research Münster (Centrum für Angewandte Wirtschaftsforschung Münster, CAWM) of Münster University was founded in 2002. The CAWM's research projects cover a broad range of economics issues, focusing on traffic and regional economics, housing economics, cooperative management, finance, energy economics as well as the economic situation and the labour market.

Within the scope of extensive research funded by third parties, the CAWM continuously provides theoretically and empirically sound analyses for ministries, enterprises, foundations and associations. In addition, the professors and staff of the CAWM are strongly committed to teaching in the Bachelor's and Master's degree courses, and they offer their students events that follow the highest teaching standards and that implement innovative teaching methods.
