About the Center for Environmental Management, Resources and Energy (CURE), Ruhr University Bochum

Climate change, the energy transition, declining biodiversity and sustainability are the challenges of modern time. These are also the topics that form the core of research and teaching at the Center for Environmental Management, Resource and Energy Economics.

CURE has been established within the Faculty of Management and Economics at the Ruhr-Universität Bochum to enhance the joint research activities of the scholars focusing on the following topics:

- Energy and climate economics
- Operational and economic sustainability
- Economics in competition-based economic systems
- Corporate environmental management
- Decarbonization of operational production and service processes
- Protection of species and resources (animals, plants, water, soil, air)

The aim of the center is, on the one hand, to bundle and coordinate the relevant teaching within the bachelor and master modules. On the other the center enhances an integrative approach, which incorporates business administration, economics and legal perspectives. The aim is to set up a group of young researchers at CURE that advances the inter- and transdisciplinary social-ecological research in conjunction with other faculties at the Ruhr-Universität Bochum.
